ABHIRAM SEETHARAGHAVA SATHISH

Product Security Engineer
0xabhiram.netlify.app | +91-720-4120-619 | abhiram6542@gmail.com
github.com/0xabhiram | linkedin.com/in/Abhiramss

PROFILE

Cybersecurity professional skilled in identifying vulnerabilities, performing penetration tests, and strengthening enterprise security. Hands-on experience in web, mobile, API and cloud security testing, analyzing source code, and uncovering critical flaws such as SQL Injection, XSS, File Upload issues, HTML Injection, and Open Redirects. Expertise also includes security automation (Leaver Automation, SIEM log correlation, and AI-driven CTEM tools), threat modeling, and enterprise security initiatives like IAM and endpoint hardening.
Leverages realistic attack simulations and industry-standard tools such as Burp Suite, Metasploit, and custom exploit scripts to replicate threats and deliver actionable remediation strategies. Contributes to both red team operations and defensive security, documenting findings, collaborating with cross-functional teams, and integrating secure practices into CI/CD pipelines and cloud environments, with a focus on safeguarding systems, applications, and infrastructure.

WORK EXPERIENCE

Product Security Engineer | Exotel, Bangalore *(Jan 2026 - Present)*

- Led end-to-end product security initiatives across web, cloud and API ecosystems for a large-scale telecom SaaS platform serving millions of users.
- Managed end-to-end VAPT engagements across products by coordinating with third-party security vendors, scoping assessments, and validating reported findings for OWASP Top 10 vulnerabilities, authentication/authorization weaknesses, and business logic flaws before production releases.
- Conducted cloud security assessments across AWS and Azure environments, identifying misconfigured IAM roles, exposed storage services, insecure security groups, and weak network configurations to strengthen overall cloud posture.
- Implemented SAST, SCA, and SBOM integration within CI/CD pipelines, enabling continuous vulnerability detection, dependency monitoring, and faster remediation across engineering repositories.
- Facilitated threat modeling sessions for new and existing product features, proactively identifying architectural and design-level security risks during early development stages.
- Designed and executed phishing simulation campaigns to assess employee security awareness, track engagement metrics, and improve resilience against social engineering attacks.
- Led incident analysis and root cause investigations for security events, implementing preventive security controls that reduced recurrence of similar vulnerabilities.
- Developed custom security automation and agentic tooling to streamline pentesting workflows, vulnerability aggregation, alert triage, and reporting processes.
- Collaborated closely with engineering, DevOps, and product teams to remediate vulnerabilities, promote secure coding practices, and significantly reduce turnaround time for high-severity fixes.

Cyber Security Engineer | Junglee Games, Bangalore *(March 2025 – Jan 2026)*

- Executed comprehensive VAPT engagements across mobile, web, API, iOS, and enterprise applications, uncovering high-impact vulnerabilities such as SQL Injection, File Upload flaws, XSS, HTML Injection, and Open Redirects, enabling proactive remediation before production release.
- Expanded security testing beyond applications by contributing to cloud security assessments (AWS), reviewing IAM configurations, storage security, and misconfiguration risks to strengthen cloud infrastructure posture.
- Designed and deployed security automation frameworks, including a custom AI-driven CTEM tool for automated threat exposure mapping and chained attack simulations, Leaver Automation for streamlined employee offboarding with automated privilege revocation, and SIEM log investigation automation to enhance real-time detection of suspicious activity.
- Conducted threat modeling and risk assessments, identifying design flaws, misconfigurations, and exploitable attack paths across both applications and cloud infrastructure.
- Implemented a fully automated DevSecOps security pipeline integrating Bitbucket, AWS EC2, and Jira; designed and integrated end-to-end static code and dependency scanning using Semgrep, TruffleHog, and OWASP Dependency-Track, with automated Jira ticket creation and assignment for high-severity findings.
- Developed custom exploit scripts, automation tools, and reusable checklists to optimize testing efficiency and consistency across engagements.

Red Team Intern | tutelr.org, Chennai, Tamil Nadu

- Executed penetration testing activities to identify critical vulnerabilities and weaknesses in systems, applications, and networks using industry-standard tools and advanced techniques.
- Leveraged virtual labs and simulation platforms to gain hands-on experience in real-world cybersecurity scenarios and strengthen technical expertise.
- Authored detailed reports documenting methodologies, findings, and recommendations, demonstrating in-depth analysis and practical application of cybersecurity concepts.
- Led a team of five members, mentoring them in report writing, technical troubleshooting, and effective resolution of identified issues.
- Conducted vulnerability assessments on Windows machines using CHAPS, uncovering security flaws and delivering actionable remediation strategies to mitigate risks.
- Designed and delivered comprehensive reports after testing Windows 10 vulnerable machines, highlighting vulnerabilities and presenting mitigation solutions to stakeholders.
- Achieved root access during CTF challenges, consistently demonstrating leadership by guiding the team in problem-solving and advancing their cybersecurity expertise.

Red Team Cybersecurity Intern | shadowfox.in

- Performed thorough port scanning using Nmap, identifying services such as FTP on port 21, SSH on port 22, and SMB on ports 135, 139, and 445, with further enumeration to gather version details and assess vulnerabilities and misconfigurations.
- Employed brute-force techniques to enumerate hidden directories on subdomains, demonstrating expertise in web application penetration testing.
- Implemented advanced login interception using Wireshark to analyze network traffic and extract sensitive credentials during authentication.
- Decoded encrypted passwords to unlock secured files, demonstrating proficiency in encryption and password-cracking techniques.
- Performed reverse engineering using PE Explorer, analyzing executable files to identify entry points and vulnerabilities for exploitation.
- Developed customized payloads with the Metasploit framework to establish reverse shell connections from Windows 10 machines.
- Tested a Windows 10 machine using the CHAPS tool, identifying vulnerabilities related to misconfigurations and outdated software that could be exploited for unauthorized access.
- Generated comprehensive reports detailing methodologies, attack execution, vulnerability analysis, and recommendations for risk mitigation.

Cybersecurity Intern | codealpha.tech

- Developed a custom network sniffer in Python to capture and analyze network traffic, gaining practical knowledge of data flow and packet structures.
- Designed and delivered an engaging online training module and presentation on phishing attacks, educating participants on identifying and mitigating phishing tactics.
- Conducted detailed code reviews of Python projects to uncover security vulnerabilities, providing actionable recommendations for secure coding practices using static analyzers.
- Identified and documented 6+ unique vulnerabilities in Python code through manual source code review, without relying on automated tools.

PROJECTS

Smart Door Automation System | TheDoMinds, Shivamogga, Karnataka

- Developed a Smart Door system using ESP8266, enabling Wi-Fi connectivity for remote control.
- Integrated a solenoid lock for secure door access, controlled through Arduino IDE, with a Blynk dashboard for remote monitoring and control.
- Programmed the system to deny unauthorized access attempts by redirecting to an admin panel, incorporating a secure scanning mechanism requiring admin approval.
- Utilized a 12V relay adapter for primary power with integrated battery backup for reliable operation.

Inter-College Fest Website | Alva's College, Moodbidri, Mangalore

- Developed a dynamic and responsive website for a state-level inter-college fest competition using HTML, CSS, JavaScript, and Bootstrap.
- Designed an interactive, mobile-compatible interface and resolved responsive design challenges across devices.
- Hosted the website on Netlify for global accessibility, optimizing for fast load times and seamless interactivity.

Dynamic Feedback Form System | Alva's College, Moodbidri, Mangalore

- Enhanced a Google Feedback Form built in Google Script by introducing dynamic allocation through PHP, overcoming the limitations of a static interface.
- Modified the complete feedback form dynamically to address the college's specific needs; the revised form was adopted by college administration for its improved functionality.
- Developed an admin access panel to streamline administrative tasks and manage feedback effectively.

TEACHING EXPERIENCE

Lecturer | Elite Institute

- Taught programming languages including C, C++, Java, Python, JavaScript, HTML, CSS, and MySQL, as well as web development using Flask.
- Delivered advanced lectures on ethical hacking for Master's students, covering vulnerability exploitation techniques across various domains.
- Designed and created Capture the Flag (CTF) challenges in web, steganography, cryptography, and networking to provide hands-on learning experiences.
- Mentored students in problem-solving skills and practical application of cybersecurity concepts, contributing to a notable increase in student admissions.
- Organized interactive lab sessions simulating real-world cybersecurity scenarios to build critical thinking and technical skills.

EDUCATION

Bachelor of Computer Applications | Alva's College, Moodbidri, Mangalore *(July 2024 | GPA: 8.6)*

Relevant coursework: Data Structures in C, Networking, C# and .NET Framework, Algorithm Design & Analysis (Python), MySQL, OOPs with Java, R Programming, Software Engineering.

CERTIFICATIONS

- CCSP - In Progress
- Certified Penetration Tester (CPT) — Red Team Academy | Credential ID: RTHACPT1126
- Practical Ethical Hacking — TCM Security | Certificate ID: cert_wqzgyng7 | 07/11/2022
- IoT-Based Door Automation Project — TheDoMinds

AWARDS

- National-Level Tech Talk Winner
- Inter-College Coding Competition Champion
- State-Level Coding Competition Participant
